DIVISION OF CORY CORPORATION

1801 FOSTER AVENUE
CHICAGO 40, U. S. A.
TELEPHONE LONG BEACH 1-3200

November 1, 1955

Gentlemen:

Enclosed is the NEW AUTOPOINT RETAIL PRICE LIST. You will see that there have been several price changes, notably among the leads and erasers. Generally speaking, however, you will find the same moderate prices on the same high quality products for which AUTOPOINT has been famous these past thirty-five years!

Also attached is a retail catalog insert, showing our latest (and, incidentally, extremely exciting!) AUTOPOINT items. The products reproduced on this page are all EXCLUSIVE WITH AUTOPOINT - designed and priced to be real sales builders for you!

The No. 1333 AUTOPOINT CHIPMASTER on the first page is proving to be the "gift-for-men" sensation of the fall market! And the AUTOPOINT MEMORAMA - an extraordinarily useful gift -- also has been a great source of gratification to us sales-wise this early in the season.

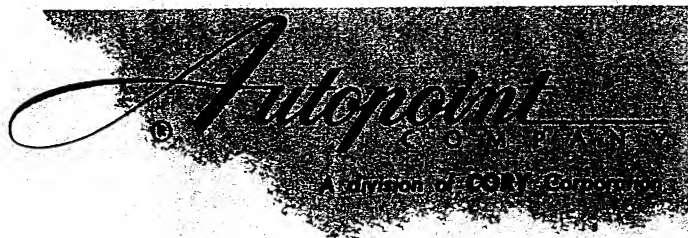

We hope our NEW PRICE LIST and NEW PRODUCT INFORMATION SHEET enable you to select your AUTOPOINT merchandise quickly and easily, so that you won't lose out on your share of this year's already-booming Christmas trade.

May we have your order at your early convenience?

Cordially,

Vice President

RHP:MH

THE INSIDE SECRET OF AUTOPOINT PENCIL EFFICIENCY

The greatest difference between the various makes of mechanical pencils is not one of cost, quality of materials and outward appearance—but a difference in *writing efficiency*...due to variations in mechanical construction...inside secrets not to be learned merely by looking at the pencils.

Any mechanical pencil—even the most costly—having the old-style, non-grip mechanism is temperamental and erratic. With the lead working loosely in the inner tube—held *only* at the upper end by being thrust into a shallow socket—and not gripped at all at the writing tip—there is just

bound to be trouble. The lead side-slips and wobbles...often wears flat at the point...may break, clog or jam...and sometimes gets discouraged and just falls out!

The famous AUTOPOINT "Grip-Tite" tip holds the lead in its spring tension, vise-like jaws—and so tightly that to all practical purposes it is a fixed part of the pencil. Yet at a turn of the barrel, the lead glides through the tip because of a pressure of one and one-half pounds exerted by the plunger, pulled downward by the mechanism's spiral grooves.

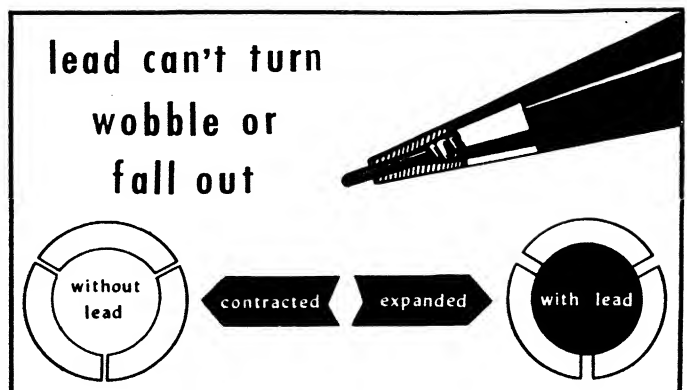

The AUTOPOINT Mechanism

The "Grip-Tite" tip, exclusively an AUTOPOINT feature, is the secret behind the AUTOPOINT pencil's unmatched economy in leads—since it enables use of a lead right down to the last one-sixteenth of an inch fragment. *Even when broken into pieces*, a lead may be efficiently used!

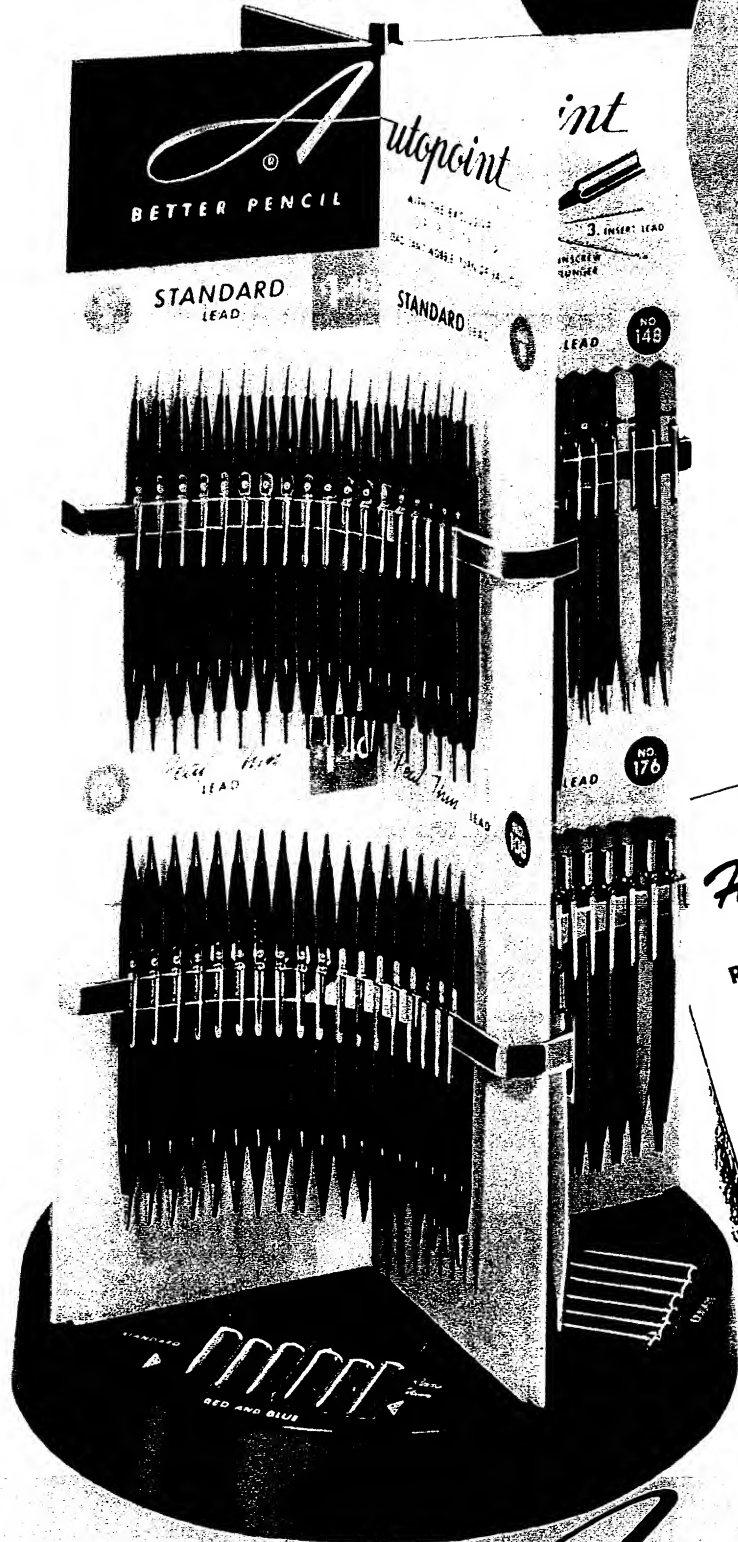

The lead opening in the 18% nickel-silver, spring-tension tip is actually smaller than the lead. It is slotted, forming three jaws that expand under pressure and permit the lead to come through—yet hold it rigid in a vise-like grip. This is the secret of writing efficiency for which AUTOPOINT pencils are famous. The large and smoothly rounded Spiral Grooves prevent clogging and jamming by particles of lead. The Lead Plunger is pulled—not pushed—downward by these Spiral Grooves, thus cannot bend or jam. When it has expelled the last particle of lead, it is automatically stopped by the Safety Zone device, thus preventing injury to the pencil. Without use of these fundamental AUTOPOINT features—*protected by patents*—it seems practically impossible to produce a pencil in which the lead will not wobble, jam or break.

The AUTOPOINT pencil mechanism is really a fine, precision-built machine in miniature—and of such finely tempered metals that it will resist the strain of constant daily use for an unbelievably long time. We have authentic records of AUTOPOINT pencils that have served their owners—and without repairs—for periods of from eight to fifteen years!

THE "GRIP-TITE" TIP

Round and Round they go-
